Freshroots Demand Planning: Components Map (Option A)

Draft v4 · built on the locked decisions of 23 Oct 2026 · tools are chosen last, once the six columns are settled

LEGEND ·····▶ data flow · AI step (green) · human decision (amber) · our app (code) · person, file or outside system

Set once (settings, not per-run input)

- Festival months: Oct, Nov, Mar (+25% demand)
- Cover limits: standard under 6 / over 14 weeks; perishable under 3 / over 4 weeks
- High-demand: last 4 weeks over 20% above the 12-week average (window includes last 4), order 1.5x
- Stockout reorder = one standard quantity
- Freshness: warn after 3 days, block after 7
- Pause, weeks 1-8 (tuning): rejections over 75% in 2 reviews; 50% sends Deepa an alert only. From week 9: over 25%
- ₹2L loss on one SKU pauses at any time
- Festival uplift and 1.5x do NOT stack
- Build tiers: 1 core, 2 pause + RCA, 3 outcome check

What AI does, and does not do

- Does: write a one-line reason for each exception.
- Does not: forecast, set a quantity, score fit, or change a flag. Rules are plain code.
- Works with no key: code writes the reason instead. No other visible AI feature.

What the system never does

- Write to Zoho, create or approve POs, or place orders
- Say 'ordered'. Final status is 'exported' only

Human in the loop

- Raghav: exports, enters on-order, reviews, sends to Zoho
- Checker: Deepa (backup not yet named; never Raghav or the build team). Owns RCA, restart and kill
- Pause = Raghav's manual process takes over
- RCA within 5 working days; no decision = stays paused
- Rejections are logged by the system, not by Raghav

Assumptions to confirm (draft)

- Raghav exports manually (watched folder = his save)
- Thresholds above are proposals, not facts
- On-order stock is typed or pre-filled (no PO data)
- Zoho CSV columns are a setting (not confirmed)
- Backup checker not yet named
- Demo: the 5 provided CSVs stand in for the SAP file
- Run-day split: full + stock-only upload
- No email, no cron: banners only (short deadline)

Known risks (named, not fixed)

- Deepa is sponsor and sole RCA reviewer, so she may lean to restart. Limit: restart and kill rules written before launch; outcome check shown.
- No backup and no escalation: if Deepa is away, a pause stays paused and Raghav's manual process runs until she acts.
- Raghav exports, enters, reviews and sends: single point of failure. Limit: system-logged rejections; time per run checked in shadow mode.
- 75% tuning trigger lets weak output run for weeks (weeks 1-8). Limit: 50% alert to Deepa, rule-fidelity gate, ₹2L trigger always on.
